Hi there Alahassa,

You can find access to our student internship application system and some general information regarding the LANL student internship programs at the web page:

http://www.lanl.gov/careers/career-options/student-internships/graduate/index.php

I have also attached a copy of the Student Symposium 2013 abstract book. This resource will provide you with a sense for the types of projects students have been supporting in the past couple of years. You can also find the names of LANL mentors who hosted the students. After you apply it makes sense to directly contact a prospective mentor who has guided the work of students in projects you would consider interesting and appropriate given your background and skill set. This will help to get you into their view and increase the likelihood of being noticed.

As a non-US citizen you should try to get a mentor lined up and begin with the paperwork required for your visa and LANL hiring process no later than the end of February. We hire foreign national (non-US) students but it is a little more labor intensive. This is why it's important to make that connection with a prospective mentor as soon as feasible.

Let me know if you have additional questions.

Best regards,

Scott Robbins, Ph.D.
Student Programs Leader
National Security Education Center
Los Alamos National Laboratory

> Laboratory. In fact, I'm an undergraduate student enrolled actually in a three years engineering circle program at Dakar (Sénégal) which emphasises economic and statistical skills. My goal at first is that you provide me an overview of your program and tell me if there is a chance I'd offer you my competences in data analysis. Thanks too.
